## Discussion of the current state of the project

- The working group discussed the current stage of curriculum development, noting key achievements and challenges faced by participants.
- The results of the conducted research and surveys were discussed.

## Discussion of the content of the curriculum

Participants discussed the structure of the modules, including the main topics to be covered:

- Principles of the circular economy.
- Sustainable development and its importance for business.
- Practical cases and implementation examples.

DB participants shared the results of the Information Day held for university students, during which the participants learned about the goals and objectives of the project.

## Determining next steps

- Discussion of potential stakeholders in participation in the online workshop “Analysis of the current state and validation for stakeholders in the Central Asia Region (Kazakhstan)”, with the aim of discussing key aspects of the circular economy and sustainable development in higher education institutions, as well as to analyze the involvement of stakeholders in this process.
- Participants agreed on the deadlines for completing the first versions of the modules and the dates of the next meetings to monitor progress.

## Conclusions

The Working Group discussed the outcomes of the capacitation through the trainings. The trainings demonstrate the practical application of CE principles to make all processes more sustainable. This experience serves as a model for educational purposes, as well as for wider application in professional practice in the fields of sustainable development and circular economy.
